## Easy-Life Fluid Filter Medium

The ultimate water treatment that does not contain chemicals

Easy-Life Fluid Filter Medium is the most versatile water treatment product on the market. It can be used to make water crystal clear. It is used for water preparation, as well as a maintenance product, a stimulator (e.g. for plant growth) and a prophylaxis (to prevent infections). It effectively solves a wide range of freshwater and saltwater problems. Furthermore, it is made from 100% natural products and is extremely safe to use.

### Easy-Life Fluid Filter Medium:

- is 100% natural & safe
- does not contain any chemicals, bacteria or other organic additives
- is highly active in all freshwater & marine aquariums, garden ponds
- solves many problems
- is a very versatile preventive product
- brings 30+ benefits to your tank

Examples of Easy-Life FFM beneficial effects in freshwater systems: makes water crystal clear; improves and stabilizes the water quality; decreases stress levels of fish; makes fish colors more vibrant; accelerates the maturing of tanks; removes (organic) chemicals, medicine residue, chlorine, heavy metals, ammonium and many other contaminants; helps plant growth; makes young fry grow much faster; neutralizes harmful bacteria; promotes breeding; makes biological filters last longer; and much more.

Easy-Life FFM prevents unnecessary suffering and dying of freshwater animals during (long distance) transport and quarantine, after a medical treatment, in case of injuries and bacterial infections, calamities like power failure and so on. The mortality rate of the animals can be decreased greatly by using Easy-Life FFM. All this with a completely natural product, that doesn't contain any chemicals, bacteria or other organic additives. Easy-Life Fluid Filter Medium is a problem solver with 30+ beneficial effects, without showing any detrimental side-effects.

## EasyStart

*Making aquarium water suitable for fish*

EasyStart is a filter starter. Its objective is to quickly purify and stabilize the water when cycling a new freshwater or marine aquarium, so that it is suitable for fish.

EasyStart is a unique combination of highly active bacteria cultures. The unique bacteria carrier ensures an accelerated increase in useful bacteria, so that, for example, the creation of poisonous nitrite can be avoided. It also helps to reduce the effects of harmful bacteria and rids the water of heavy metals and other chemical contamination. The result is a healthy aquarium with lively fish which have vibrant colors.

## AquaMaker: water conditioner & detoxifier

It makes aggressive tap water immediately suitable for all freshwater and marine aquariums.

AquaMaker is a powerful, fast-working water conditioner and makes aggressive tap water immediately suitable for all freshwater and marine aquariums. AquaMaker can also be used in reef aquariums and garden ponds. It is absolutely safe for all fish, plants, corals, shrimps, snails and the biological filter.

### AquaMaker is very versatile:

- Removes chlorine
- Removes chloramine
- Removes heavy metals like copper, zinc and lead
- Binds and detoxifies poisonous ammonia
- Binds and neutralizes toxic nitrite
- Binds and neutralizes nitrate
- Destresses fish
- Protects the mucous membrane and gills of fish

AquaMaker has no impact on the pH, KH or GH. Furthermore, AquaMaker will not overactivate skimmers.

**Normal dosage: 10 ml per 50 litres.**  
**In case of critical situations: 20 - 50 ml per 50 litres.**

## ProFito

### Universal plant food

Easy-Life ProFito is an all-in-one, universal plant food which is suitable for all water plants in aquaria. The composition of ProFito ensures strong, healthy and lush plant growth. Thanks to the optimal composition of the ingredients, plants have everything they need for unhindered, strong and lush growth.

#### Product benefits

- Highly concentrated, all-in-one, universal plant food
- All the necessary nutrients in a single product, such as iron, potassium and manganese
- Strong, healthy and lush plant growth
- Promotes the production of cytokinins, which stimulates the division of cells
- Produces wider leaves and intense colours
- Improves and consolidates the biological balance in the aquarium
- Contains no nitrates or phosphates
- Extremely economical to use

#### ProFito stimulates the division of cells

The high concentrations of, in particular, iron, potassium and magnesium in ProFito fulfill the plants' need to absorb large quantities of these nutrients. This plant food contains many micronutrients (including manganese, boron, cobalt, lithium, molybdenum, copper, tin, nickel, fluorine, iodine, aluminium, zinc, selenium and vanadium).

These substances and a number of rare minerals that are added give plants exactly what they require for trouble-free growth. The plants are stimulated to create cytokinins (plant hormones), which stimulate the division of cells. The leaves grow to become much wider and the colours become extremely vibrant.

## Ferro

*Extra iron (Fe) when needed*

Easy-Life Ferro contains easily absorbable iron for water plants. Iron is essential for the good development of plant leaves. Iron ensures that the leaves are green thanks to the creation of chlorophyll.

A lack of iron results in the leaves turning yellow, which is known as chlorosis. Ferro helps to prevent this problem. If there are fast-growing plants in an aquarium, then there is a good chance of iron deficiency. In that case, it is recommended to add Ferro to prevent problems.

8.4 fl.oz. 250 ml    16.9 fl.oz. 500 ml    33.8 fl.oz. 1000 ml

**Normal dosage: 1 fl.oz. per 160 gal. (5 ml per 100 liters) raises the Fe-concentration with 0.5 ppm (0.5 mg/l).**

## Potassium - K

Extra potassium when needed

**Easy-Life Potassium is an essential macro nutrient and is at least as important as iron!**

A shortage of potassium easily arises in areas with soft water. This demonstrates itself by white, decolorized leaves in the top of a plant. The leaves may also have black pinholes. These symptoms are often confused with the symptoms of a deficiency of iron. It is recommended to add both Easy-Life Ferro and Easy-Life Potassium to compensate for or prevent deficiencies, particularly in aquaria with fast-growing plants.

8.4 fl.oz. 250 ml    16.9 fl.oz. 500 ml    33.8 fl.oz. 1000 ml

## EasyCarbo: Liquid Carbon Source

Carbon is essential for good plant growth

**EasyCarbo is an extremely powerful and effective carbon source for aquarium plants. It also actively combats and prevents the growth of algae.**

Carbon (in the form of CO<sub>2</sub> dissolved in the water) is one of the most important nutrients for optimal plant growth. If there is a lack of carbon, plants are not able to optimally assimilate and grow. As a result of this deficiency, plants stop growing and no longer compete with algae for the nutrients. If this carbon deficiency lasts for too long, then plants start to leak sugars and other nutrients which attract algae. As a result, leaves become covered in algae and look unattractive. EasyCarbo is the solution to this problem. After approximately two weeks of using EasyCarbo, plants visibly grow better and look better. This is particularly true of swamp plants (Cryptocoryne sp., Echinodorus sp., etcetera). As a result of the increased competition for nutrients, algae find it very difficult to survive and, in most cases, they disappear altogether.

### The use of ProFitto and EasyCarbo is the right combination

Plants require more than just carbon. Trace elements are also essential. Since their presence cannot be precisely measured and we, therefore, do not know which trace elements are present in the water, ProFitto is the ideal solution to enrich water with trace elements in the most complete way.

## 25 Root Sticks

### Optimal root feeding

The Easy-Life 25 Root Sticks are ideal to feed plants directly at the roots.

The product contains 25 pieces of special clay sticks that are very nutritious and have a high iron content. Due to the special pre-treatment of these sticks, they do not fall apart immediately upon contact with water. The release of nutrients goes very gradually over a period of several weeks. The water will not get cloudy at all, so algae cannot take advantage of that. The product is very easy to use and causes no additional water pollution.

Use these root sticks for plants with a strong need for root nutrition such as Cryptocoryne, Echinodorus or Lotus. If the soil layer is very narrow or the plant roots are small, the sticks can be very easily broken into smaller pieces. The root sticks can therefore be used in all cases.

**25 sticks per jar.**

## Voogle: First Aid For Fish

Prevent fish diseases without any antibiotics

**Voogle is an innovative product that helps to keep fish healthy and improves their immune system. Using Voogle will limit the use of antibiotics to a minimum. The natural immune system is stimulated, so that fish are better protected against diseases.**

Every fish has a natural immune system against pathogens. Transportation, dirty water or a high number of pathogens in the water cause a lot of stress. Stress costs a great deal of energy and has a negative effect on the immune system. The mucous skin, gills and fins, in particular, become more sensitive to diseases, such as white spot, fungi and other types of infection. Weekly use of Voogle ensures that fish remain optimally protected in a natural way and the dangers resulting from pathogens are greatly reduced.

- Voogle has no harmful effect on fish, shrimps, lobsters, molluscs, plants or the biofilter.
- Voogle has no effect on the important water parameters and does not cause resistance.
- Voogle mostly consists of plant extracts and supporting vitamins and minerals.
- Voogle breaks down naturally, so that it is not necessary to change the water after using the product.
- for freshwater and marine aquariums

**Voogle: the safe alternative that contains no antibiotics**

Voogle can be used to prevent fish from becoming ill and, consequently, to avoid the use of antibiotics. Even if fish are already ill (Spot diseases like Ich, Cryptocaryon, fungal diseases, Columnaris and other bacterial infections), Voogle is able to help the fish combat pathogens.

For preventing problems, Voogle can be used on a weekly basis. The product is also useful when new fish are brought into the aquarium, to prevent possible new infections. For the same reason, Voogle can also be added to the water in fish transport bags.

**Five-day course treatment: 1. fl. oz. per 30 gal. (10 ml per 40 litres).**

## AlgExit: Against Algae Stains • Red & Green Algae

Clean water without algae stains

AlgExit easily removes Green and Red Algae Stains in freshwater aquariums. Removes and cleans algae from plants, bottom material and other aquarium surfaces. Unwanted filamentous, brush and beard algae stains are removed. Harmless to fish, crustaceans and plants. Also great for preventing algae problems. Very economical in use.

Add 1 fl. oz. per 80 gal. (10 ml per 100 litres) once a week for four consecutive weeks.

## Blue Exit

### Cyano Stain Remover Caused By Cyanobacteria

Blue Exit easily removes stains caused by CYANOBACTERIA in freshwater aquariums. Removes and cleans algae stains from plants, bottom material and other aquarium surfaces. Unwanted blue-green and slime algae stains are removed rigorously. Harmless to fish, shrimps, snails and plants. Also great for preventing cyano problems. Very economical in use.

**Directions:** Remove the adsorbent materials (such as active carbon) during treatment but keep the filters running. Shake before use. Water changes are not needed after using this product.

**Dosage:** 1 fl. oz. per 40 gal. (10 ml per 50 litres) daily for 5 consecutive days. The cyano stains disappear within 5 to 14 days after the first dose. Do not replenish or change the water, nor make use of adsorbents until the stains are gone.

**Prevention & Maintenance:** 1 fl. oz. per 80 gal. (10 ml per 100 litres) weekly.

## Excital: Against Red Stains Caused by Cyano

### Cyano Stain Remover Caused By Cyanobacteria

Removes and cleans algae stains from corals, live rock, bottom material and other aquarium surfaces. Stimulates the growth of beneficial micro-organisms in light-sensitive places in the aquarium. Unwanted red, blue-green, black and bubble causing algae stains are removed. Does not contain algacides or erythromycin. Safe to use with all marine fish, invertebrates and corals. Will not harm the beneficial nitrifying bacteria in the biofiltration media.

**Dosage schedule:**

1 fl. oz. per 30 gal. (10 ml per 40 litres) daily for 5 consecutive days. Visible results within 10 days. Prevention & Maintenance: 1 fl. oz. per 80 gal. (10 ml per 100 litres) weekly.

Remove all carbon from filters during treatment but keep the filters running. Water changes are not needed after using this product.

## Water Test Phosphate (PO<sub>4</sub>) Ultra Sensitive

Very sensitive, simple and fast.

Phosphate Color Test for  
freshwater and marine aquariums.

This very sensitive Easy-Life Phosphate Test is suitable for freshwater and saltwater aquariums. The kit includes two different ranges, measurable from 0.01 to 2.5 mg/L = ppm. The PO<sub>4</sub> Test is carried out with only one reagent!

- Test for freshwater and saltwater aquariums, ponds
- User-friendly, reliable and very accurate
- Color test with color card, easy to read
- PO<sub>4</sub> detection limit 0.01 mg/L (=ppm)
- Low measuring range : 0.00 - 0.02 - 0.04 - 0.06 - 0.08 - 0.10 mg/L (= ppm)
- High measuring range : 0.0 - 0.5 - 1.0 - 1.5 - 2.0 - 2.5 mg/L (= ppm)
- At least 75 tests provided in the test kit

## 6in1 Test Strips

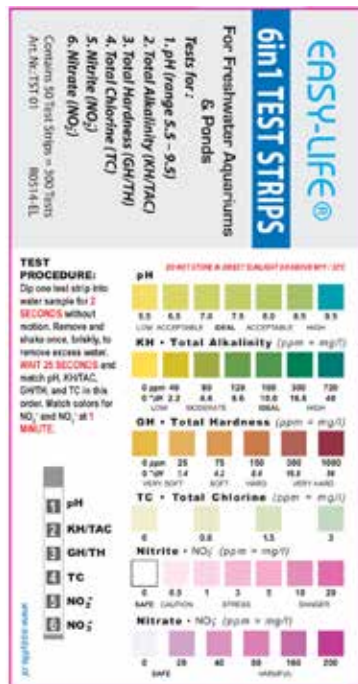

The numbers tell the tale

In order to achieve an optimal situation in an aquarium, it is extremely important to regularly test the water quality. The Easy-Life 6in1 Test Strips are quick to use and extremely accurate.

The Easy-Life 6in1 Test Strips give you the results to five important water parameters within 60 seconds.

The following five important water parameters are measured:

- Acidity level           pH
- Carbonate hardness   KH
- Total hardness       GH
- Total chlorine       TC
- Nitrite concentration   NO<sub>2</sub>
- Nitrate concentration   NO<sub>3</sub>

## About Easy Life

Since 1998, Easy Life International B.V. has produced aquarium and pond products under the brand name Easy-Life. We distinguish ourselves in the market by the fact that our university-educated specialists have years of experience in keeping aquariums and, as a result, combine their practical experience and knowledge to produce innovative products. Thanks to the excellent reputation of Easy-Life and the excellent effects of its products, the products are now available in more than 40 countries, mostly due to word-of-mouth advertising. The products are now no longer only used by hobbyists, but also by retail traders, wholesalers, zoos and importers and exporters of fish and corals.
