Easy-Life Filter Medium (FM)

The ultimate water treatment that does not contain chemicals

Easy-Life Filter Medium is the most versatile water treatment product on the market. It can be used to make water crystal clear. It is used for water preparation, as well as a maintenance product, a stimulator (e.g. for plant growth) and a prophylaxis (to prevent infections). It effectively solves a wide range of freshwater and saltwater problems. Furthermore, it is made from 100% natural products and is extremely safe to use.

Easy-Life Filter Medium (Easy-Life FM) is a unique product which greatly simplifies the keeping of fish, plants and invertebrates in freshwater and marine aquaria. Easy-Life FM does not only make the water crystal clear, but also produces healthy, active and colourful fish. Easy-Life FM contributes to a superior water quality (so that the water has to be changed less often) and a reduced growth of algae, and it greatly reduces the stress of the living creatures. Easy-Life FM is a natural product and does not contain chemical additives, but still has more than 30 positive effects!

Easy-Life FM:

- is 100% natural & safe
- does not contain any chemicals, bacteria or other organic additives
- is highly active in all freshwater aquariums, marien aquariums and paludariums
- solves many problems
- is a very versatile preventive product
- brings 30+ benefits to your tank

● **Normal dosage: 10 ml per 30 litres.**

AquaMaker: water conditioner & detoxifier

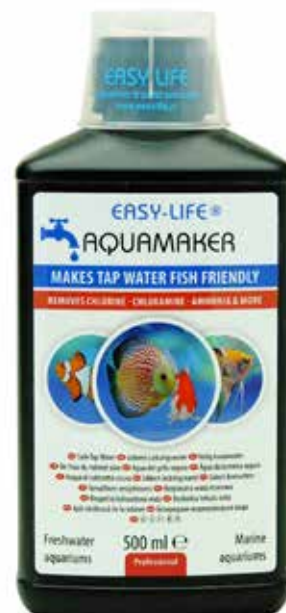

It makes aggressive tap water immediately suitable for all freshwater and marine aquariums

AquaMaker is a powerful, fast-working water conditioner and makes aggressive tap water immediately suitable for all freshwater and marine aquariums. AquaMaker can also be used in reef aquariums and garden ponds. It is absolutely safe for all fish, plants, corals, shrimps, snails and the biological filter.

AquaMaker is very versatile:

- Removes chlorine
- Removes chloramine
- Removes heavy metals like copper, zinc and lead
- Binds and detoxifies poisonous ammonia
- Binds and neutralizes toxic nitrite
- Binds and neutralizes nitrate
- Destresses fish
- Protects the mucous membrane and gills of fish

AquaMaker has no impact on the pH, KH or GH. Furthermore, AquaMaker will not overactivate skimmers.

- **Normal dosage: 10 ml per 50 litres.**
In case of critical situations: 20 - 50 ml per 50 litres.

EasyStart: Ready To Go

Making aquarium water suitable for fish

EasyStart is a filter starter. Its objective is to quickly purify and stabilize the water when cycling a new freshwater or marine aquarium, so that it is suitable for fish.

EasyStart is a unique combination of highly active bacteria cultures. The unique bacteria carrier ensures an accelerated increase in useful bacteria, so that, for example, the creation of poisonous nitrite can be avoided. It also helps to reduce the effects of harmful bacteria and rids the water of heavy metals and other chemical contamination. The result is a healthy aquarium with lively fish which have vibrant colours.

● Normal dosage: 10 ml per 50 litres.

Humin Pro+

Tropical Humic and Fulvic Acid Blend

For Healthy Fish & Shrim

Humin Pro+ is a valuable blend of humic and fulvic acids that promotes good health and a strong immune system in aquariums, while recreating water conditions close to the animals' natural tropical habitat. This benefits not only aquatic animals but also the plants and microorganisms in the aquarium. Aquatic plants absorb nutrients more efficiently, while beneficial microorganisms continue to thrive, promoting a healthy and balanced ecosystem. Humin Pro+ does not turn the water brown.

The humic substances in Humin Pro+ support vitality, coloration, and overall health in aquarium fish and shrimp. They help reduce microbial pressure, thus preventing diseases—especially those affecting the skin. Humin Pro+ also encourages successful breeding in both fish and shrimp.

Humic and fulvic acids are organic compounds formed during the decomposition of plant and animal matter in the soil. In tropical environments, intense decomposition caused by heat and humidity can lead to higher concentrations of humic substances in soils, sediments, and water. These compounds play a key role in nutrient cycling and in transporting minerals and metals in aquatic ecosystems.

Additionally, Humin Pro+ helps aquatic animals cope with stress caused by salts and pollutants such as heavy metals (copper, cadmium, etc.) by increasing their resilience and stress resistance.

Catappa-X

Fluid Catappa leaves

Catappa leaves are added to aquarium water because of the healing effect they have on fish and shrimps. Catappa-X is the effective, fluid variant of the leaves.

The leaves of the Catappa tree release healing substances when they are immersed in water. The disadvantage of doing so is that, in time, they decompose, which results in the release of organic compounds. This has a number of unpleasant side effects: it turns the water brown and the released organic compounds contaminate the water.

Catappa-X is the answer to these problems. It does not discolour nor contaminate the water and it lowers the bacterial count, which greatly reduces the chance of disease. Catappa-X allows fish and shrimps to flourish and have more vibrant colours.

Product benefits

- Fish and shrimps with more vibrant colours
- Improves the general health of the living creatures
- Prevents diseases
- Does not turn the water brown
- No extra organic contamination

Catappa-Marine

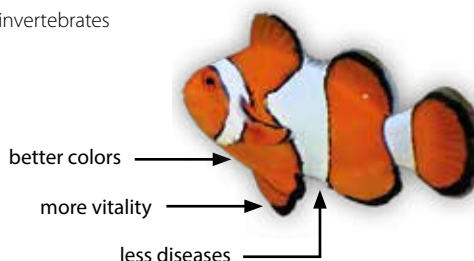

Fluid Catappa leaves suitable for marine aquariums

Leaves from the Catappa tree are known for their healing effect on fish: they lower germ density (less pathogens), prevent fungal infections, improve growth, prevent problems with the slime coat and stimulate the vitality and colouring.

Through a special procedure, ingredients from Catappa leaves are made suitable for marine aquariums. Catappa-Marine does not discolour nor contaminate the water, while the vitality and colouring of the fish visibly improves and fish are less prone to disease.

Product benefits

- Fish and shrimps with more vibrant colours
- Improves the general health of the living creatures
- Prevents diseases
- Does not turn the water brown
- No extra organic contamination
- Completely reef safe
- Safe for soft corals, hard corals, shrimps, fish and other invertebrates
- Has no influence on any water parameters
- Has no influence on skimmers

● Normal dosage: weekly 10 ml per 100 litres.

OsmoVital

OsmoVital – Mineralizing and Hardening Salt for soft & osmosis water

Create the perfect living environment with OsmoVital

OsmoVital is a highly soluble mineralizing and hardening salt that provides all essential minerals—without nitrates or phosphates—to create an optimal aquatic environment. With OsmoVital, you can quickly and easily remineralize reverse osmosis water, demineralized water, filtered rainwater, or tap water that is too soft. Ideal for freshwater aquariums with fish and plants, it ensures optimal water conditions. OsmoVital is easy to use when first setting up your aquarium and during every subsequent water change.

OsmoVital increases KH (carbonate hardness) and GH (general hardness) and adds essential vitamins and trace elements such as potassium, iron, manganese, boron, iodide, and fluoride. Both KH and GH contribute to a stable pH level in the aquarium: while GH provides the necessary minerals, KH plays a more direct role in maintaining a stable pH by acting as a buffer.

ProFito: All-in-one food for plants

Universal plant food

Easy-Life ProFito is an all-in-one, universal plant food which is suitable for all water plants in aquaria. The composition of ProFito ensures strong, healthy and lush plant growth. Thanks to the optimal composition of the ingredients, plants have everything they need for unhindered, strong and lush growth.

Product benefits

- Highly concentrated, all-in-one, universal plant food
- All the necessary nutrients in a single product, such as iron, potassium and manganese
- Strong, healthy and lush plant growth
- Promotes the production of cytokinins, which stimulates the division of cells
- Produces wider leaves and intense colours
- Improves and consolidates the biological balance in the aquarium
- Contains no nitrates or phosphates
- Extremely economical to use

Press release 2004 : Award "Best aquarium product 2008 - Germany"

- Normal dosage: weekly 10 ml per 100 litres.

GreenScape: strong NPK fertilizer + Micro

Professional aquascaping fertilizer with high NPK (Nitrate, Phosphate, Potassium) and trace elements

GreenScape is a professional aquascaping fertilizer for aquariums with (many) of plants and few or no fish. GreenScape is a micro-rich, complete NPK+ fertilizer with nitrate, phosphate, potassium, iron, manganese and many other essential trace elements (including V, B, Co, Li, I, Mo, Ni, Sn, Al, Zn, Se).

GreenScape or RedScape?

For additional red plants: use RedScape NPK fertilizer.

Redscape is much lower in nitrate than Greenscape and ensures that plants become redder by limiting nitrates. We recommend GreenScape for normal use and with occasional Redscape fertilizer for red effects.

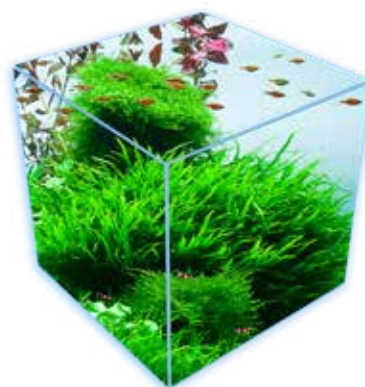

Product Benefits

- a highly concentrated and very complete aquascaping NPK fertilizer
- all nutrients, such as nitrate, phosphate, potassium, iron, potassium and manganese, in one product
- promotes the creation of cytokinins, which stimulate cell division
- for larger leaves and intense coloring
- extremely well stabilized
- with extra iron

● Normal dosage:

10 ml per 50 liters weekly – or 1.5 ml per 50 liters per day.

10 ml per 50 liters adds: 20 mg/l Nitrate NO₃, 2 mg/l Phosphate PO₄, 13 mg/l Potassium K, 0.4 mg/l Iron Fe and the required trace elements.

RedScape: lean NPK fertilizer + Micro

Professional aquascaping fertilizer with lean NPK (Nitrate, Phosphate, Potassium) and trace elements

RedScape is a true aquascaping fertilizer for aquariums with lots of plants and few or no fish.

This light fertilizer intensifies the red color of red plants by limiting nitrate. RedScape is a micro-rich, complete NPK+ fertilizer with nitrate, phosphate, potassium, iron, manganese and many essential trace minerals (including V, B, Co, Li, I, Mo, Ni, Sn, Al, Zn, Se).

GreenScape or RedScape?

For additional red plants: use RedScape NPK fertilizer.

Redscape is much lower in nitrate than Greenscape and ensures that plants become redder by limiting nitrates. We recommend GreenScape for normal use and with occasional Redscape fertilizer for red effects.

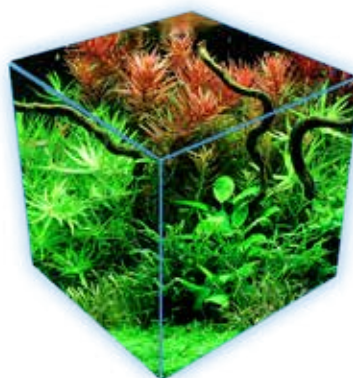

Product Benefits

- a highly concentrated and very complete aquascaping NPK fertilizer
- all nutrients, such as nitrate, phosphate, potassium, iron and manganese etc., in one product
- promotes the creation of cytokinins, which stimulate cell division
- for larger leaves and intense coloring
- extremely well stabilized
- with extra iron

● Normal dosage:

10 ml per 50 liters weekly – or 1.5 ml per 50 liters per day.

10 ml per 50 liters adds: 4 mg/l Nitrate NO₃, 2 mg/l Phosphate PO₄, 3.3 mg/l Potassium K, 0.4 mg/l Iron Fe and the required trace elements.

EasyCarbo: liquid carbon source

Carbon is essential for good plant growth

EasyCarbo is an extremely powerful and effective carbon source for aquarium plants. It also actively combats and prevents the growth of algae.

Carbon (in the form of CO₂ dissolved in the water) is one of the most important nutrients for optimal plant growth. If there is a lack of carbon, plants are not able to optimally assimilate and grow. As a result of this deficiency, plants stop growing and no longer compete with algae for the nutrients. If this carbon deficiency lasts for too long, then plants start to leak sugars and other nutrients which attract algae. As a result, leaves become covered in algae and look unattractive. EasyCarbo is the solution to this problem. After approximately two weeks of using EasyCarbo, plants visibly grow better and look better. This is particularly true of swamp plants (Cryptocoryne sp., Echinodorus sp., etcetera). As a result of the increased competition for nutrients, algae find it very difficult to survive and, in most cases, they disappear altogether.

The use of ProFito and EasyCarbo is the right combination.

Plants require more than just carbon. Trace elements are also essential. Since their presence cannot be precisely measured and we, therefore, do not know which trace elements are present in the water, ProFito is the ideal solution to enrich water with trace elements in the most complete way.

- Normal dosage: daily 1 ml per 50 litres.

EasyCarbo Bio: natural liquid carbon source

Carbon is essential for good plant growth

EasyCarbo Bio is a natural liquid carbon source for aquarium plants on a natural basis. Carbon is important for plants to grow well and compete effectively with algae. With too little carbon or CO₂ in the aquarium, algae often get a chance.

Carbon (in the form of CO₂ dissolved in the water) is one of the most important nutrients for optimal plant growth. If there is a lack of carbon, plants are not able to optimally assimilate and grow. As a result of this deficiency, plants stop growing and no longer compete with algae for the nutrients. If this carbon deficiency lasts for too long, then plants start to leak sugars and other nutrients which attract algae. As a result, leaves become covered in algae and look unattractive.

The use of ProFito and EasyCarbo Bio is the right combination

Plants require more than just carbon. Trace elements are also essential. Since their presence cannot be precisely measured and we, therefore, do not know which trace elements are present in the water, ProFito is the ideal solution to enrich water with trace elements in the most complete way.

Ferro: iron food Fe

Extra iron when needed

Easy-Life Ferro contains easily absorbable iron for water plants. Iron is essential for the good development of plant leaves. Iron ensures that the leaves are green thanks to the creation of chlorophyll.

A lack of iron results in the leaves turning yellow, which is known as chlorosis. Ferro helps to prevent this problem. If there are fast-growing plants in an aquarium, then there is a good chance of iron deficiency. In that case, it is recommended to add Ferro to prevent problems.

250ml

500ml

- Normal dosage: 5 ml per 100 litres raises the Fe-concentration with 0.50 ppm or 0.50 mg/l.

Potassium

Extra potassium is often necessary

A shortage of potassium easily arises in areas with soft water. This demonstrates itself by white, decolourized leaves in the top of a plant. The leaves may also have black pinholes. These symptoms are often confused with the symptoms of a deficiency of iron. It is recommended to add both Easy-Life Ferro and Easy-Life Potassium to compensate for or prevent deficiencies, particularly in aquaria with fast-growing plants.

250ml

500ml

- Normal dosage: 10 ml per 100 litres raises the K-concentration with 4 ppm or 4 mg/l.

Nitro: Nitrogen food

Essential macronutrients!

Easy-Life Nitro and Easy-Life Fosfo are used to compensate for a deficiency of nitrogen (N) and phosphorus (P), respectively. A deficiency of these macronutrients immediately leads to faltering growth or even to growth arrest.

A shortage of N and P can quickly arise in plant aquaria that contain very few fish or no fish at all, because very little or no fish feed is used. Together with fish excrement, fish feed is the most important source of N and P. A deficiency can also arise in aquaria with a very high density of plants. Nitro (which contains nitrate NO_3) and Fosfo (which contains phosphate PO_4) immediately compensate for these deficiencies.

- **Normal dosage: 10 ml per 100 litres raises the NO_3 -concentration with 2 ppm or mg/l and K-concentration with 1.3 ppm or mg/l.**

Fosfo: Phosphate plant food

Essential macronutrients!

Easy-Life Nitro and Easy-Life Fosfo are used to compensate for a deficiency of nitrogen (N) and phosphorus (P), respectively. A deficiency of these macronutrients immediately leads to faltering growth or even to growth arrest.

A shortage of N and P can quickly arise in plant aquaria that contain very few fish or no fish at all, because very little or no fish feed is used. Together with fish excrement, fish feed is the most important source of N and P. A deficiency can also arise in aquaria with a very high density of plants. Nitro (which contains nitrate NO_3) and Fosfo (which contains phosphate PO_4) immediately compensate for these deficiencies.

- **Normal dosage: 10 ml per 500 litres raises the PO_4 -concentration with 0.1 ppm.**

25 Root Sticks

Optimal root feeding

The Easy-Life 25 Root Sticks are ideal to feed plants directly at the roots.

The product contains 25 pieces of special clay sticks that are very nutritious and have a high iron content. Due to the special pre-treatment of these sticks, they do not fall apart immediately upon contact with water. The release of nutrients goes very gradually over a period of several weeks. The water will not get cloudy at all, so algae cannot take advantage of that. The product is very easy to use and causes no additional water pollution.

Use these root sticks for plants with a strong need for root nutrition such as Cryptocoryne, Echinodorus or Lotus. If the soil layer is very narrow or the plant roots are small, the sticks can be very easily broken into smaller pieces. The root sticks can therefore be used in all cases.

● 25 sticks per jar.

AlgExit: against green algae

Clean water without algae

Algae are produced when an aquarium is not well balanced. Causes of an unbalanced aquarium are the excessive feeding of fish, too many fish in an aquarium, excessive lighting or excessive fertilization. You also take them home when you purchase fish or plants!

AlgExit is a safe and effective product for combating almost all types of algae in a freshwater aquarium. Algae, such as beard algae, brush algae and filamentous algae, are effectively wiped out. AlgExit is easy and economical to use and harmless to fish, shrimps, molluscs and plants. The algae growth is first brought to a standstill and then it disappears. Any algae spores that are still present in the water are removed.

Blue Exit: against blue algae (Cyano)

Clean water without blue-green algae (cyanobacteria)

Blue Exit is the new way of getting rid of blue-green algae (cyanobacteria) without using antibiotics or compounds which contain copper.

Cyanobacteria (blue-green algae, slime algae or smear algae) often arise as a result of fertilization, an imbalanced bacteria situation, seriously contaminated bottom material (rotting) or too low nitrate levels.

Blue Exit effectively gets rid of cyanobacteria. Blue Exit is easy and safe to use and is harmless to fish, shrimps, molluscs and plants. If there is a serious infestation, the Blue Exit treatment can be prolonged for a few days, even with a double dose.

250ml

Bio-Exit Green

Clean water & plants without green algae

A biological imbalance can cause plants to grow poorly and leak sugars. These sugars can serve as food sources for unsightly algae (such as beard algae, filamentous algae, brush algae and brown algae). Bio-Exit Green restores this biological balance by countering the leakage of sugars in plants by offering a unique mix of specific organic acids and growth stimulators.

When used correctly, it is not harmful to fish, plants, shrimps and other invertebrates.

● Balance treatment during 2 weeks:

Day 1: 10 ml per 40 liters (10 US Gallons) of water

Day 7: 10 ml per 40 liters (10 US Gallons) of water

Day 14: change the water

No water changes during the treatment.

Bio-Exit Blue

Clean soil without blue-green algae (cyanobacteria)

A microbiological imbalance of soil bacteria can ensure that blue algae or cyanobacteria have the opportunity to grow. Bio-Exit Blue strongly stimulates the growth of heterotrophic soil bacteria. In this way the microbiological balance in the soil can be completely restored.

When used correctly, it is not harmful to fish, plants, shrimps and other invertebrates.

- **Balance treatment during 2 weeks:**
Day 1: 10 ml per 40 liters (10 US Gallons) of water
Day 7: 10 ml per 40 liters (10 US Gallons) of water
Day 14: change the water
No water changes during the treatment.

Bio-Exit Silicate

Prevents brown deposits on aquarium plants, decoration and substrate

Also caused by the new climatic conditions, silicates are getting more and more directly into your freshwater aquarium via the tap water (groundwater).

Unfortunately, this promotes the growth of diatoms in particular.

This algae is harmless but unsightly and overgrows substrate, plants, equipment and decorative items with a brown, rough deposits.

- **Dosage: 10 ml per 20 liters on day 1 and on day 3.**
No water change for 7 days after the first dose.

Excital: against Cyano in salt water aquariums

Clean water without red slime algae (cyanobacteria)

Excital is the new way of removing cyanobacteria without using antibiotics or compounds which contain copper.

Cyanobacteria (red slime algae) often arise if the water temperature rises, sometimes in combination with a high level of organics in the water or rotting bottom material. Excital effectively gets rid of cyanobacteria. Excital is easy and safe to use and is harmless to fish and corals. If there is a serious infestation, then it is recommended to first remove the cyanobacteria by hand as much as possible and then add Excital. If there is a serious infestation, the Excital treatment can be prolonged for a few days, even with a double dose.

- **Normal dosage: for 5 days 10 ml per 40 litres per day. Visible results within 10 days. The first days time is needed for building up sufficient bacteria to combat and replace the red algae. This process takes time. After 5-7 days result will become visible. In some cases a second treatment is needed.**

Voogle: Perfect fish care, avoid antibiotics!

Voogle is an innovative product that helps to keep fish healthy and improves their immune system. Using Voogle will limit the use of antibiotics to a minimum. The natural immune system is stimulated, so that fish are better protected against diseases.

Every fish has a natural immune system against pathogens. Transportation, dirty water or a high number of pathogens in the water cause a lot of stress. Stress costs a great deal of energy and has a negative effect on the immune system. The mucous skin, gills and fins, in particular, become more sensitive to diseases, such as white spot, fungi and other types of infection. Weekly use of Voogle ensures that fish remain optimally protected in a natural way and the dangers resulting from pathogens are greatly reduced.

- Voogle has no harmful effect on fish, shrimps, lobsters, molluscs, plants or the biofilter.
- Voogle has no effect on the important water parameters and does not cause resistance.
- Voogle mostly consists of plant extracts and supporting vitamins and minerals.
- Voogle breaks down naturally, so that it is not necessary to change the water after using the product.

● Normal dosage

Maintenance: 10 ml per 100 litres weekly.

New fish: 10 ml per 20 litres.

Quarantine - import: Five-day course treatment, 10 ml per 40 litres.

Sick fish: Five-day course treatment, 10 ml per 40 litres.

Voogle Koi

Perfect Koi care, avoid antibiotics!!

Voogle Koi is an innovative product that helps to keep fish healthy and improves their immune system. Using Voogle Koi will limit the use of antibiotics to a minimum. The natural immune system is stimulated, so that fish are better protected against diseases.

Every fish has a natural immune system against pathogens. Transportation, dirty water or a high number of pathogens in the water cause a lot of stress. Stress costs a great deal of energy and has a negative effect on the immune system. The mucous skin, gills and fins, in particular, become more sensitive to diseases, such as white spot, fungi and other types of infection. Weekly use of Voogle Koi ensures that fish remain optimally protected in a natural way and the dangers resulting from pathogens are greatly reduced.

- Voogle Koi has no harmful effect on fish, shrimps, lobsters, molluscs, plants or the biofilter.
- Voogle Koi has no effect on the important water parameters and does not cause resistance.
- Voogle Koi mostly consists of plant extracts and supporting vitamins and minerals.
- Voogle Koi breaks down naturally, so that it is not necessary to change the water after using the product.

● Normal dosage Voogle Koi:

Dosage for sick Koi: 10 ml per 60 litres per day for 3 days consecutively. **Dosage for very sick Koi:** 10 ml per 30 litres per day for 3 days consecutively. Wait another week for maximum and visible effect. Voogle is biodegradable, so after treatment there is no need for water changes or usage of adsorption materials to remove the product from the water. **To prevent problems:** use 10 ml per 120 litres weekly for a stable, high level of resistance.

EasyNeo

Safe Transport - Keep fish safe & healthy

Catching and transporting may damage or stress fish. This weakens the mucous membrane which is the primary protection of fish against diseases because it contains many antibodies.

This makes fish more sensitive to:

- Spot diseases like Ichthyophthirius sp. in freshwater or Cryptocaryon irritans in saltwater
- Bacterial infections
- Fungal diseases

By adding EASYNEO® the immune system is significantly strengthened in a natural way. This effectively prevents illnesses and even mortality caused by stress and damage during transport.

After transport, the aquarium can be treated with EASYNEO® 100 ml bottle for perfect aftercare to avoid diseases during the habituation period.

● **Shops Only - EasyNeo 500 ml bottle with dosing pump - Shops Only**
Add to fishbag for safe transport of fish

- 1x push per fishbag of 0 - 2 litres
- 2x push per fishbag of 2 - 4 litres
- 3x push per fishbag of 4 - 6 litres

● **EasyNeo 100 ml: aftercare for consumer aquariums**

After transport, the aquarium can be treated with EASYNEO® for perfect aftercare to avoid diseases during the habituation period.

Dosage: 10 ml per 20 liters of aquarium water after releasing new fish in the aquarium.

100% safe & 100% natural:

EASYNEO® contains no antibiotics, chemicals or heavy metals and is suitable for all fresh- and saltwater animals. It is harmless to fish, young fry, shrimp, snails, turtles and corals.

Nano Line

Ideal for Small Tanks: Precise Dosage, Reliable Results, and a Compact Format That Fits Easily on the Shelf

Nano Line is a range of 3 compact and high-performance products, specially developed for small aquariums. Ideal for shrimp tanks, bettas, and planted nano aquariums, this range offers real added value in a reduced format.

Nano Plant

- ✓ Highly concentrated and complete fertilizer
- ✓ Favorise une croissance forte et équilibrée
- ✓ Extremely cost-effective to use

Nano Water

- ✓ Makes aggressive tap water safe for aquariums
- ✓ Prevents stress and protects the mucous membranes and gills of fish
- ✓ Removes chlorine and chloramine
- ✓ Neutralizes ammonia and heavy metals

Nano Fish & Shrimp

- ✓ Enhances vitality and coloration of fish and shrimp
- ✓ Stimulates the immune system
- ✓ Prevents diseases and infections
- ✓ Supports reproduction

6in1 Test Strips

In order to achieve an optimal situation in an aquarium, it is extremely important to regularly test the water quality. The Easy-Life 6in1 Test Strips are quick to use and extremely accurate.

The Easy-Life 6in1 Test Strips give you the results to five important water parameters within 60 seconds.

The following five important water parameters are measured:

Acidity level	pH
Carbonate hardness	KH
Total hardness	GH
Chlorine	Cl
Nitrite concentration	NO ₂
Nitrate concentration	NO ₃

Water test Phosphate (PO₄)

Very sensitive and easy to perform

The very sensitive and accurate Easy-Life Phosphate testkit is suitable for fresh water and marine aquariums. There are two different ranges within the testkit. A low range from 0.00 - 0.10 mg/l (ppm) and high range from 0 - 2.5 mg/l (ppm). The Easy-Life Phosphate water test only needs 1 reagents!

- suitable for fresh water and marine aquariums
- easy to use, reliable and ultra sensitive
- colortest, easy to compare with a color chart
- PO₄ detectable from 0.01 mg/l (=ppm)
- low range: 0.00 - 0.02 - 0.04 - 0.06 - 0.08 - 0.10 mg/l (=ppm)
- high range: 0.0 - 0.5 - 1.0 - 1.5 - 2.0 - 2.5 mg/l (=ppm)

MaxiCoral A & B: Professional mix

MaxiCoral A & B must be used together to prevent a deficiency in essential minerals

Healthy, colourful coral in a marine aquarium is extremely attractive to look at. MaxiCoral A & B are essential products to help achieve healthy, colourful corals.

MaxiCoral A & B form an ideal professional mix with more than 40 trace elements, which enrich the saltwater. MaxiCoral A & B have been developed after careful analysis of saltwater samples from various (tropical) regions at varying depths. An average ideal mix was taken from these analyses, taking into consideration the demonstrable use of the various elements. This has been translated into more than 40 elements which have been combined together in MaxiCoral A & B.

MaxiCoral A contains, amongst other things, a strontium/barium complex, Mg, Mn, Fe, Mo, Li, Rb, Cr, Co, Cu, Zn, Ni and Se.

MaxiCoral B contains, amongst other things, a fluorine/iodine mix, bromine, potassium and boron.

● Normal dosage:

MaxiCoral A & B must be used together to prevent a deficiency in essential minerals. Dosage: 10 ml per 300 litres weekly.

Strontium (Sr)

Strontium is an important element for the growth of corals

The optimum strontium concentration in a marine aquarium is 8 - 12 mg per litre (ppm). Easy-Life Strontium is a concentrated product which is ideal to use to compensate for a deficiency.

● Normal dosage: 10 ml per 500 litres.

Magnesium (Mg)

Magnesium is essential for the growth of healthy, attractive corals

The optimal magnesium concentration in a marine aquarium is 1,250 – 1,400 mg per litre (ppm). Easy-Life Magnesium is a concentrated product which is ideal to use to compensate for a deficiency.

● Normal dosage: 10 ml per 30 litres raises the Mg-concentration with 10 mg/l or ppm.

Iode (I)

Iodine supplement

Iodine protects coral against UV radiation and forms a natural protection against all sorts of parasites.

The optimal concentration of iodine (which is a combination of iodine, iodide and iodate) is 0.06 mg per litre (ppm) in a marine aquarium. Easy-Life Iodine contains iodide and iodate in the most optimal ratio and is ideal for compensating for a deficiency.

● Normal dosage Iode: 10 ml per 500 litres weekly.

Calcium (Ca)

Calcium is essential for the growth of coral

The optimum calcium concentration in a marine aquarium is 410 - 450 mg per litre (ppm). Easy-Life Calcium is a powerful, concentrated product which compensates for a deficiency.

● Normal dosage: 10 ml per 100 litres raises the Ca-concentration with 20 mg/l or ppm.

pH-Buffer (KH⁺)

In time, a marine aquarium will lose its carbonate hardness (KH), which may lead to a dangerous acidity level (pH value)

Easy-Life pH-Buffer (KH⁺) safely increases the KH, so that the pH value is stabilized at the correct level. The product contains in total 18.100 dKH.

500ml

- **Normal dosage: 500 ml is enough for about 18.100 dKH. Measurement spoon inside.**

Since 1998, Easy Life International B.V. has produced aquarium and pond products under the brand name Easy-Life. We distinguish ourselves in the market by the fact that our university-educated specialists have years of experience in keeping aquariums and, as a result, combine their practical experience and knowledge to produce innovative products. Thanks to the excellent reputation of Easy-Life and the excellent effects of its products, the products are now available in more than 60 countries, mostly due to word-of-mouth advertising. The products are now no longer only used by hobbyists, but also by retail traders, wholesalers, zoos and importers and exporters of fish and corals.
